Subject: Microsoft Anti-trust case

I cannot believe that the United States Federal Government is letting Microsoft off so easily after having been found guilty of so many charges. They are a monopoly that has absolute control over the PC market and will be free to charge whatever prices they choose for their products and there's not a thing that any of us in the Information Technology industry can do about it. Look at their new licensing policies for Pete's sake. I'm sure Bill Gates and Steve Ballmer are having a good laugh at all of our expense.

Don't believe me? Next time you go into a CompUSA or any other computer store and just try to find any application that doesn't run on Windows. This is wrong and it shouldn't be this way and it doesn't look like our government has the guts to stand up to a financial dictator.

Sincerely saddend
